Packing List

2.1 Anti-static Precautions

WARNING!

Static electricity can destroy certain electronics. Make sure to follow the ESD precautions to prevent damage to the product, and injury to the user.

Make sure to adhere to the following guidelines:

- **Wear an anti-static wristband:** Wearing an anti-static wristband can prevent electrostatic discharge.
- **Self-grounding:** Touch a grounded conductor every few minutes to discharge any excess static buildup.
- **Use an anti-static pad:** When configuring any circuit board, place it on an anti-static mat.
- **Only handle the edges of the PCB:** Don't touch the surface of the motherboard. Hold the motherboard by the edges when handling.

2.2 Unpacking Precautions

When the iQ7-BT is unpacked, please do the following:

- Follow the antistatic guidelines above.
- Make sure the packing box is facing upwards when opening.
- Make sure all the packing list items are present.

Installation

3.1 Anti-static Precautions

WARNING:

Failure to take ESD precautions during the installation of the iQ7-BT may result in permanent damage to the iQ7-BT and severe injury to the user.

Electrostatic discharge (ESD) can cause serious damage to electronic components, including the iQ7-BT. Dry climates are especially susceptible to ESD. It is therefore critical that whenever the iQ7-BT or any other electrical component is handled, the following anti-static precautions are strictly adhered to.

- **Wear an anti-static wristband:** Wearing a simple anti-static wristband can help to prevent ESD from damaging the board.
- **Self-grounding:** Before handling the board, touch any grounded conducting material. During the time the board is handled, frequently touch any conducting materials that are connected to the ground.
- **Use an anti-static pad:** When configuring the iQ7-BT, place it on an anti-static pad. This reduces the possibility of ESD damaging the iQ7-BT.
- **Only handle the edges of the PCB:** When handling the PCB, hold the PCB by the edges.

3.2 Installation Considerations

NOTE:

The following installation notices and installation considerations should be read and understood before installation. All installation notices must be strictly adhered to. Failing to adhere to these precautions may lead to severe damage and injury to the person performing the installation.

**WARNING:**

The installation instructions described in this manual should be carefully followed in order to prevent damage to the components and injury to the user.

Before and during the installation please **DO** the following:

- Read the user manual:
 - The user manual provides a complete description of the iQ7-BT installation instructions and configuration options.
- Wear an electrostatic discharge cuff (ESD):
 - Electronic components are easily damaged by ESD. Wearing an ESD cuff removes ESD from the body and helps prevent ESD damage.
- Place the iQ7-BT on an antistatic pad:
 - When installing or configuring the motherboard, place it on an antistatic pad. This helps to prevent potential ESD damage.
- Turn all power to the iQ7-BT off:
 - When working with the iQ7-BT, make sure that it is disconnected from all power supplies and that no electricity is being fed into the system.

Before and during the installation of the iQ7-BT **DO NOT**:

- Remove any of the stickers on the PCB board. These stickers are required for warranty validation.
- Use the product before verifying all the cables and power connectors are properly connected.
- Allow screws to come in contact with the PCB circuit, connector pins, or its components.

3.4 Mounting iQ7-BT to Baseboard

**NOTE:**

Baseboard can be designed by the end user, customized by IEI, or purchased from IEI. For more information visit the IEI website (www.ieeworld.com) or contact an IEI sales representative.

**WARNING:**

Never run the Qseven module without the heatsink and a thermal pad. The thermal pad acts as a thermal interface between the module and the heatsink. The heatsink must be installed on the iQ7-BT to maintain proper operating temperatures. Make sure to maintain the heatsink temperature under 60°C (or 85°C for W2 models) in operation.

iQ7-BT Qseven Module

NOTE:

- The **TXE** BIOS option (refer to **Section 4.3.10**) must be disabled when the user needs to flash BIOS in the following situations:
1. Flash the BIOS of the baseboard (IQ7-DB-MATX).
 2. Flash the BIOS of the newly installed iQ7-BT module.

Follow the steps below to install the iQ7-BT to the optional baseboard.

Step 1: Align the Qseven connector on the edge of the iQ7-BT with the corresponding socket on the baseboard. Slide the iQ7-BT into the socket at an angle of about 20°. (Figure 3-2).

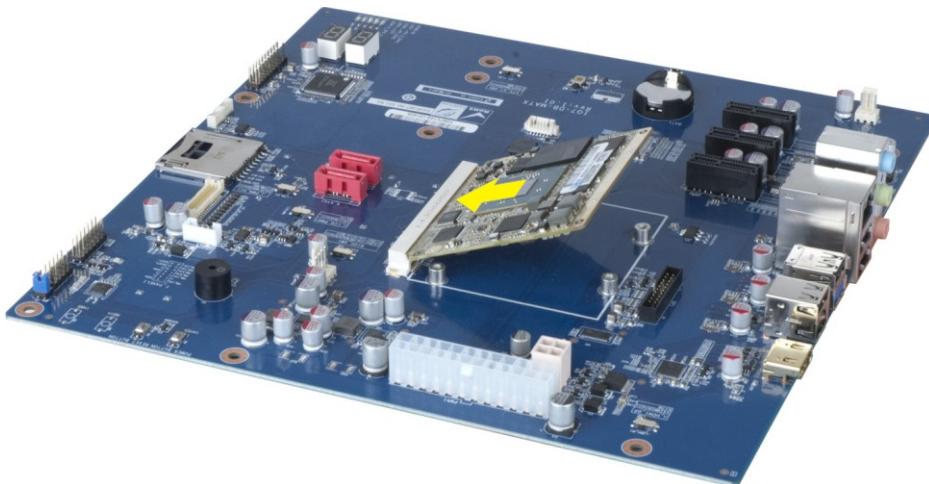

Figure 3-2: Connect the Qseven Connectors

Step 2: Ensure a thermal pad is placed on the CPU of the iQ7-BT.

Step 3: Place the heatsink on the iQ7-BT, aligning the retention screw holes and gently pushing the heatsink down.

Step 4: Secure the heatsink to the iQ7-BT and the baseboard with the supplied retention screws (Figure 3-3).

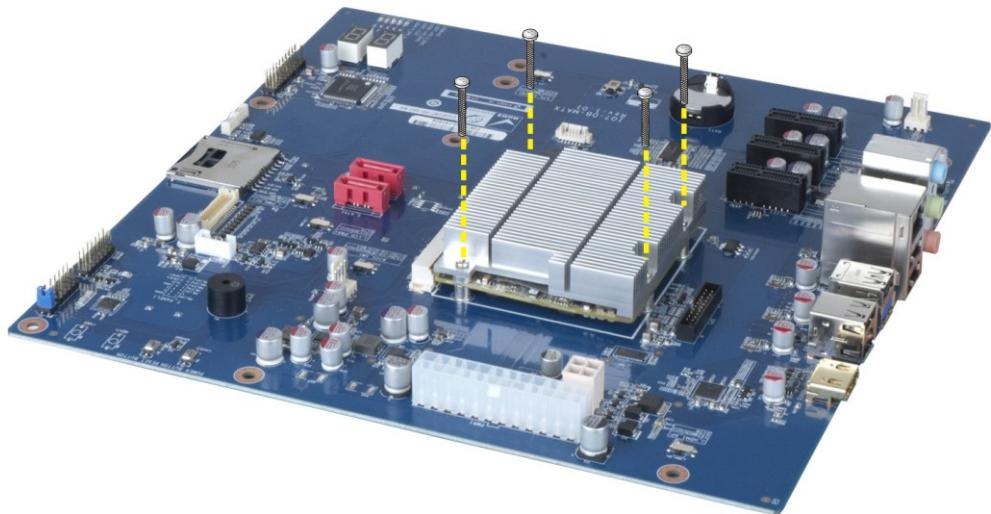

Figure 3-3: Secure the Heatsink

3.5 Available Drivers

All the drivers for the iQ7-BT are available on IEI Resource Download Center (<https://download.ieeworld.com>). Type iQ7-BT and press Enter to find all the relevant software, utilities, and documentation.

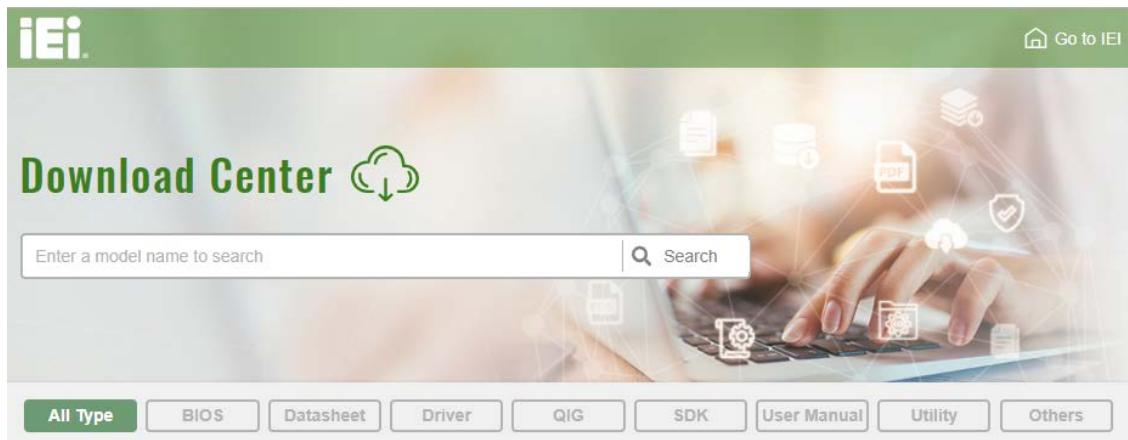

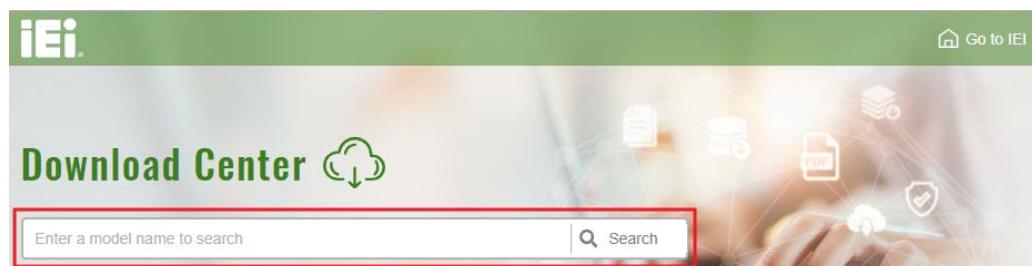

Figure 3-4: IEI Resource Download Center

3.5.1 Driver Download

To download drivers from IEI Resource Download Center, follow the steps below.

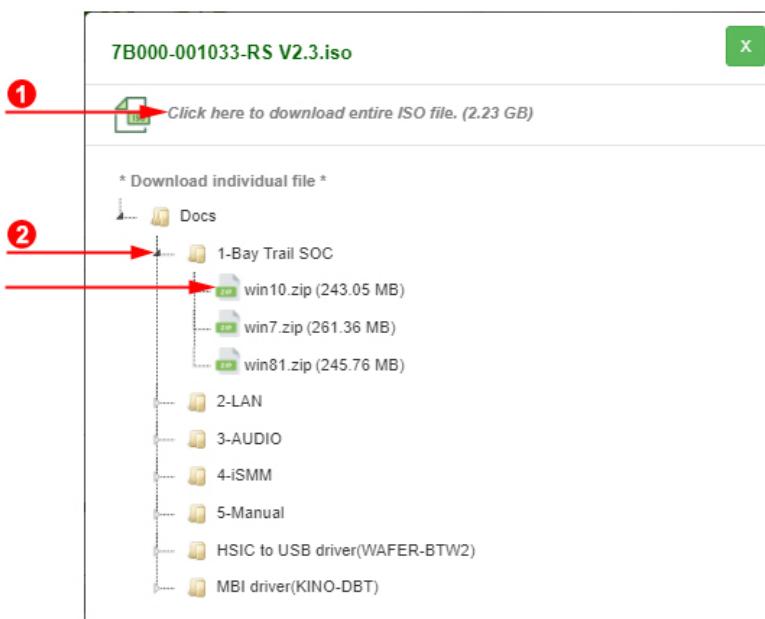

Step 1: Go to <https://download.ieeworld.com>. Type iQ7-BT and press Enter.

Step 2: All product-related software, utilities, and documentation will be listed. You can choose **Driver** to filter the result.

File Name	Published	Version	File Checksum

Watchdog Timer

**NOTE:**

The following discussion applies to DOS environment. Contact IEI support or visit the IEI website for specific drivers for other operating systems.

The Watchdog Timer is provided to ensure that standalone systems can always recover from catastrophic conditions that cause the CPU to crash. This condition may have occurred by external EMIs or a software bug. When the CPU stops working correctly, Watchdog Timer either performs a hardware reset (cold boot) or a Non-Maskable Interrupt (NMI) to bring the system back to a known state.

A BIOS function call (INT 15H) is used to control the Watchdog Timer.

INT 15H:

AH – 6FH Sub-function:	
AL – 2:	Sets the Watchdog Timer's period.
BL:	Time-out value (Its unit-second is dependent on the item "Watchdog Timer unit select" in CMOS setup).

Table D-1: AH-6FH Sub-function

Call sub-function 2 to set the time-out period of Watchdog Timer first. If the time-out value is not zero, the Watchdog Timer starts counting down. When the timer value reaches zero, the system resets. To ensure that this reset condition does not occur, calling sub-function 2 must periodically refresh the Watchdog Timer. However, the watchdog timer is disabled if the time-out value is set to zero.

A tolerance of at least 10% must be maintained to avoid unknown routines within the operating system (DOS), such as disk I/O that can be very time-consuming.

**NOTE:**

When exiting a program it is necessary to disable the Watchdog Timer, otherwise the system resets.
